

## **Intelligent Travel Solution for JP Morgan & Chase AI Track**

### **Abstract:**

The travel and entertainment industry is a massive global market, valued in the billions of dollars. In the wake of the COVID-19 pandemic, travel has seen a significant resurgence, as people begin to venture out and explore the world once again. However, time is a precious commodity, and many travelers find themselves spending hours researching and planning their trips. One of the key considerations for travelers is budget - deciding where to spend their money and what to splurge on. This can be a challenging task, as there are countless options available, and it can be difficult to know where to begin. This problem statement highlights the need for a solution that can help streamline the travel planning process, making it easier for travelers to find and book the perfect trip, without spending hours researching and comparing options.

Additionally, with the rise of online travel booking platforms, the market has become increasingly competitive. This has led to a plethora of options for travelers, making it even more challenging to decide where to go and what to do. This problem statement is not limited to just finding the best deals on flights, hotels, and activities, but also includes the need for personalized recommendations and curated itineraries.

Furthermore, post-pandemic travel has also brought new concerns such as health and safety protocols. Travelers are becoming more conscious about the measures being taken by hotels, airlines, and other travel providers to ensure the safety of their customers. This problem statement also encompasses the need for a solution that can provide detailed information about the health and safety protocols of different travel providers, to help travelers make informed decisions.

In summary, this problem statement highlights the need for a comprehensive travel planning solution that can help travelers navigate the complex and ever-changing travel market. The solution should include features such as personalized recommendations, curated itineraries, budget management, and information about health and safety protocols. This will help travelers make informed decisions and spend their time and money in the most efficient way possible.

So, we have come with an idea of building an application which will do all the tasks in a single place, The concept idea behind a trip planning application is to provide users with a comprehensive and user-friendly tool that streamlines the process of planning and booking travel itineraries. The application aims to make it easy for users to find and book flights, hotels, and activities, while also providing personalized recommendations and curated itineraries to help users make informed decisions.

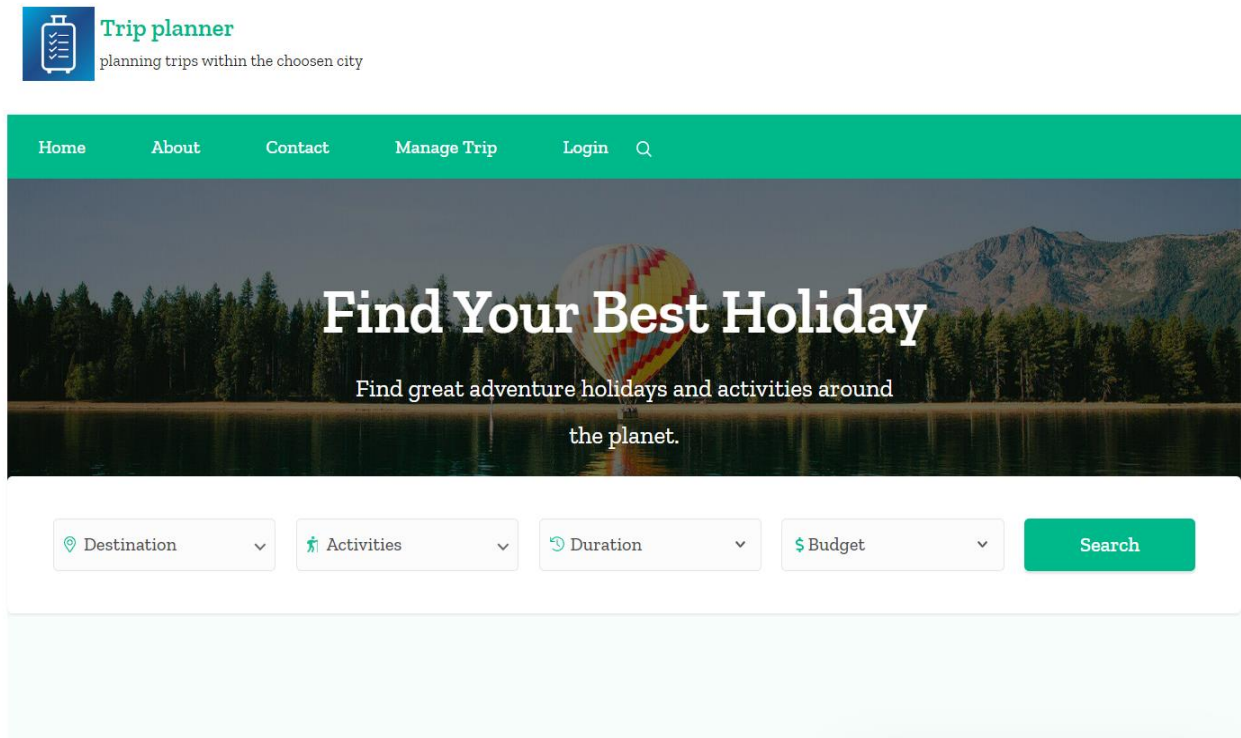

The application utilizes data such as the user's preferences, past bookings, and search history to provide personalized recommendations and create a more personalized travel experience. Users can easily search for and compare different options, such as flights, hotels, and activities, and book them directly through the application. The application provides budget management tools, which help users to set a budget for their trip and track expenses.

The application also provides detailed information about the health and safety protocols of different travel providers to help users make informed decisions. It also includes a trip management feature, which allows users to access all of their travel details, itineraries, and confirmations in one place, and make changes and updates to their trip easily. The application also has a sharing feature which allows users to share their itinerary with friends and family, and also collaborate on trip planning with others.

For Example: Application will take the inputs from user like travel destination, date, timings, activities and budget, then it will suggest the travel plans with provided activities and set up a perfect plan that will be under budget. Application will contain filters like mode of travel after which user can select the most preferred way. The application will also suggest some overbudget (very close to user's budget) trips which could attract the user. It will provide the ratings of everything that is contained in the plan making it more user friendly. Also, the travel plans can be suggested or shared by user to his friends or family.

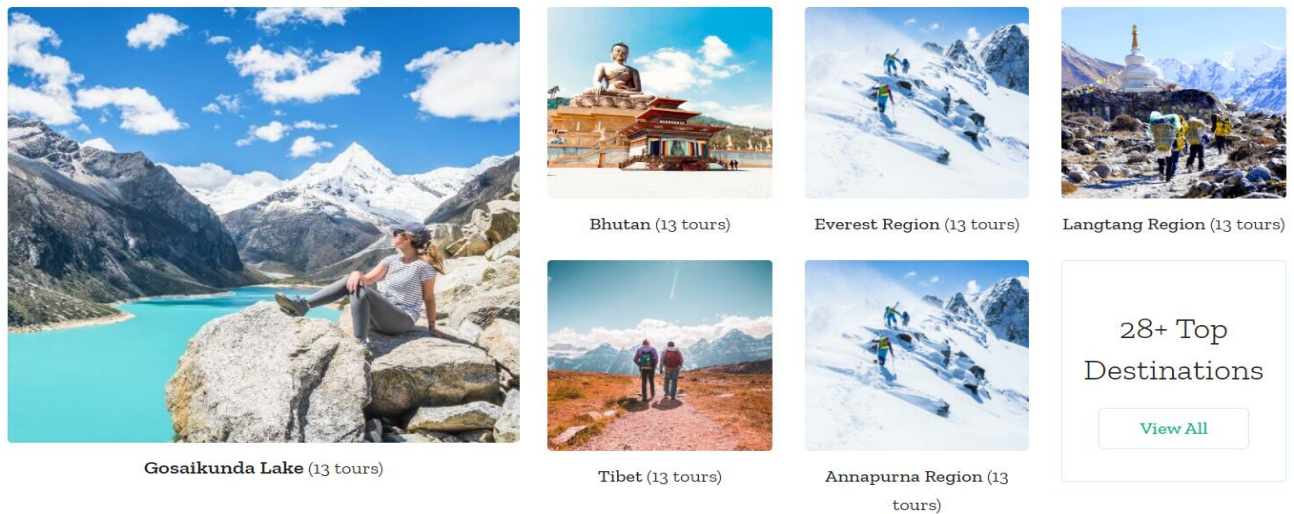

Overall, the concept idea behind the trip planning application is to provide a one-stop-shop for travel planning, where users can find, book, and manage all aspects of their trip in one place, making the process more convenient, efficient, and personalized.
